

# A Customer Support Bot for the Airline Industry

## TROJAN HEX

Geetha P K – 22z219

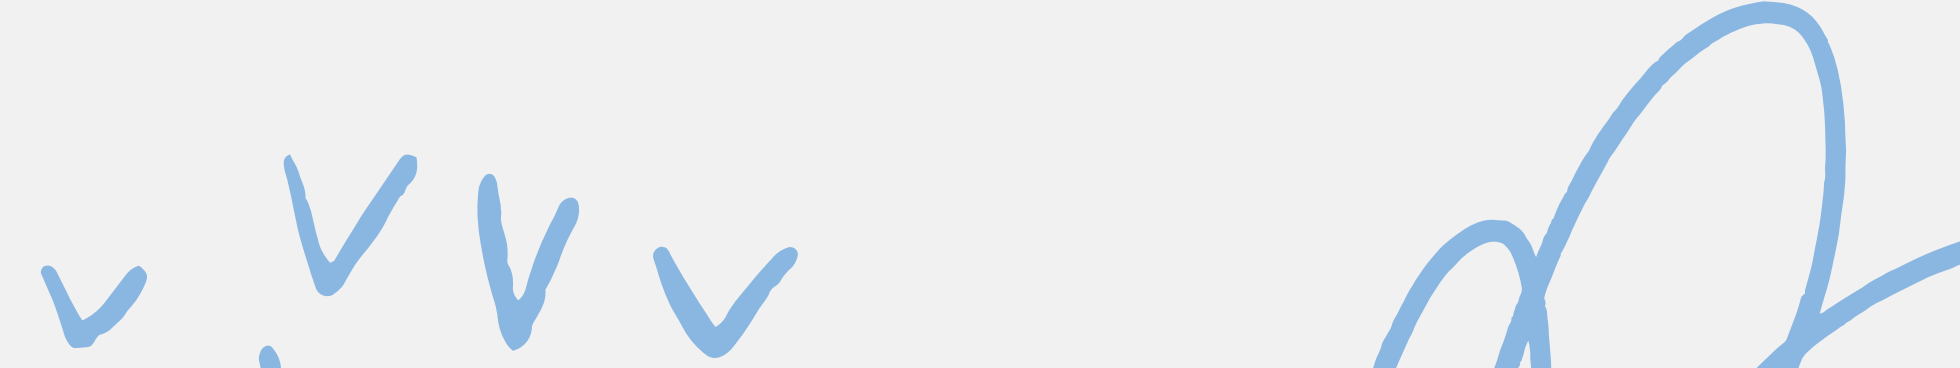

Harshini S P – 22z224

Mithra K M – 22z238

# Problem Statement

- The objective is to design an intelligent system that automatically handles airline customer requests such as checking flight status, canceling trips, verifying policies, and answering travel rule inquiries.
  - Each request type follows a predefined sequence of tasks — collecting flight details, interacting with airline APIs for real-time data, and retrieving relevant policy information.
  - The system should interpret customer messages, identify the correct request type, execute the required tasks, and deliver accurate, timely responses to streamline interactions and reduce manual effort.
- 

# Objective

- Build a smart, automated support system for airlines
- Integrate AI intent understanding + workflow execution
- Provide:
  1. Fast, accurate request handling
  2. Low-latency backend
  3. Easy scalability for new features

# Proposed Solution Overview

- **Customer message** → Gemini API → Request Type
- **Node.js backend** orchestrates tasks
- **React frontend** provides a simple interface
- **Mock airline APIs** handle booking, cancel, seat info
- Returns **JSON response / UI update** instantly

**01.** AI-powered request understanding (Gemini API)

**02.** Automated workflows for multiple airline services

**03.** Real-time API integration

**04.** Interactive Frontend (React UI)

**05.** Modular & scalable architecture

**06.** Logging + feedback mechanism

# Key Features

```
graph TD; Title[Key Features] --> F01[01. AI-powered request understanding (Gemini API)]; Title --> F02[02. Automated workflows for multiple airline services]; Title --> F03[03. Real-time API integration]; Title --> F04[04. Interactive Frontend (React UI)]; Title --> F05[05. Modular & scalable architecture]; Title --> F06[06. Logging + feedback mechanism];
```

# System Architecture

01. Frontend (React) – user input + response display
  02. AI Layer (Gemini API) – intent classification
  03. Backend (Node.js/Express) – orchestrates workflows
  04. Integration Layer – connects to airline APIs
  05. Data & Logging Layer – stores mock data + logs
- 
- 

# Workflow

- User types "Cancel my flight AB1234"
- Gemini API → returns Cancel Trip intent
- Node backend → executes Cancel Trip workflow
- Calls mock /flight/booking and /flight/cancel APIs
- Returns JSON response → React UI displays confirmation

# Module Description

## Intent Service

Uses Gemini API  
to classify  
requests

## Workflow Engine

Handles different  
airline workflows

## API Handler

Connects to mock  
airline APIs

## Response Builder

Formats  
structured JSON  
responses

## Logger Module

Records latency  
and feedback

# Example Use Case 1: Cancel Trip

**Input:** "Cancel my flight PNR AB1234"

**Process:**

- Gemini API → returns Cancel Trip
- Node backend calls  
/flight/booking
- Cancels flight via /flight/cancel
- Generates refund response

**Output:**

```
{  
  "message": "Flight Cancelled",  
  "refund_amount": 1850,  
  "refund_date": "2025-10-25"  
}
```

# Example Use Case 2: Seat Availability

**Input:** "Show me available seats for AB1234"

**Process:**

1. Gemini → intent: Seat Availability
2. Backend → calls /flight/available\_seats
3. Returns seat map & prices
4. Output: Seat layout displayed on React UI

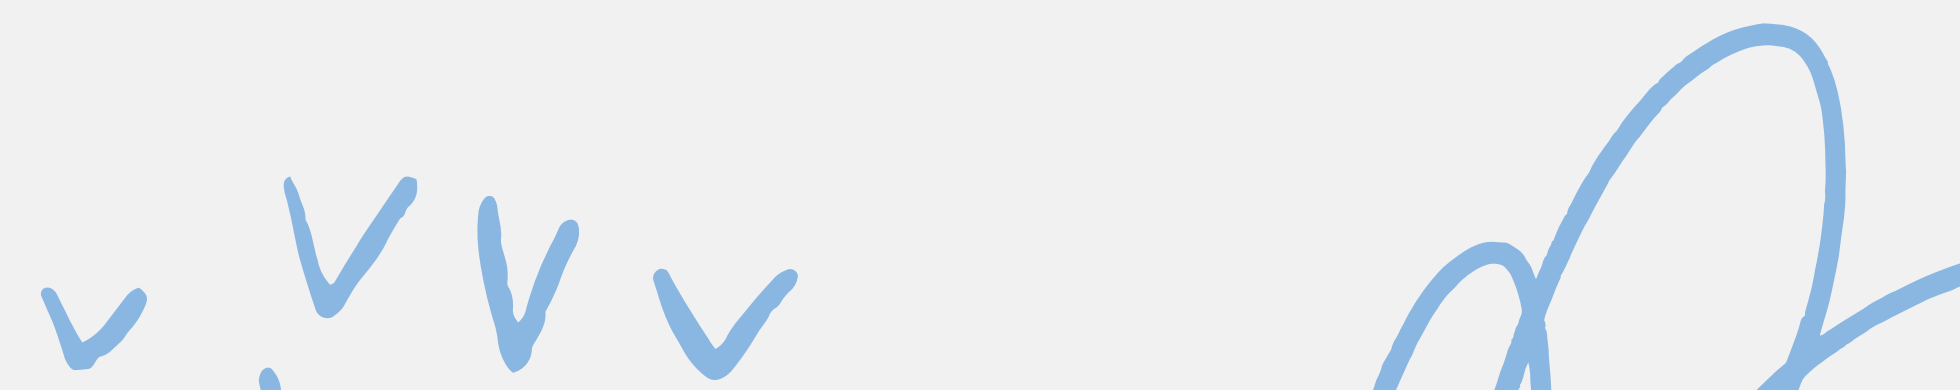

# Challenges:

- Integrating Gemini API securely
- Handling API errors and timeouts
- Keeping latency low on free tier

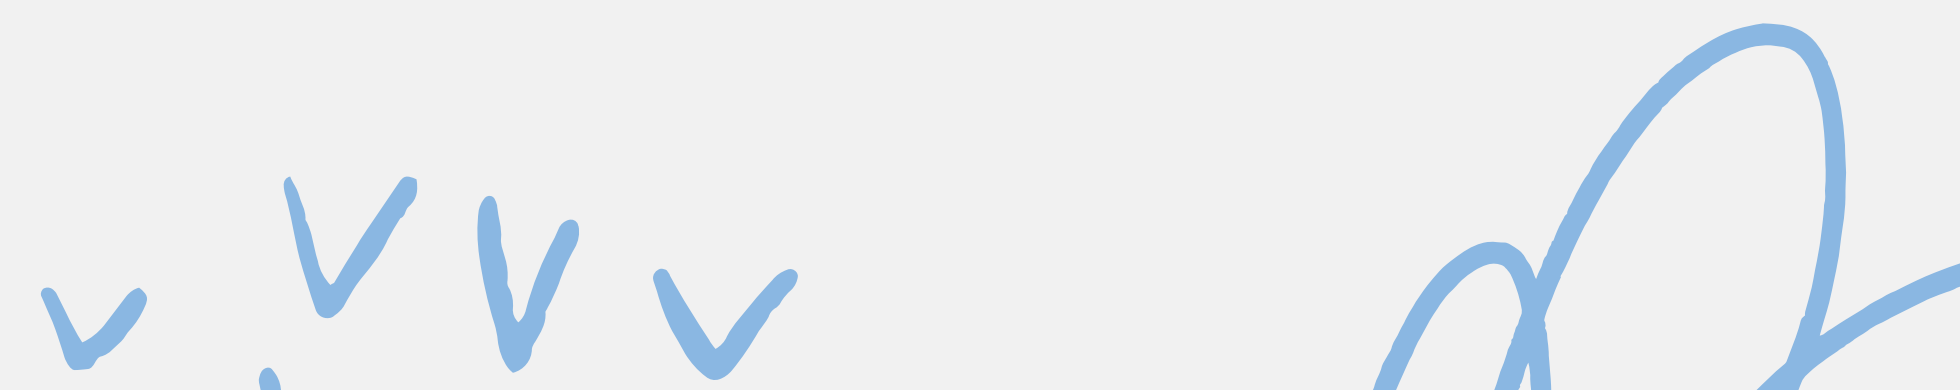

# Future Enhancements:

- Add voice input & multilingual support
  - Integrate real airline data APIs
  - Use vector DB for policy search
  - Deploy on cloud with monitoring
- 

# Conclusion

- Built a complete AI-driven customer support workflow
  - Achieved real-time automation of airline requests
  - Extensible for real enterprise adoption
  - Demonstrates integration of AI + Backend + Frontend
- 

The background is a light gray color, decorated with various hand-drawn blue doodles. These include several overlapping circles and loops at the top, a series of concentric arcs at the bottom left, a wavy line at the bottom center, and several small 'v' shapes at the bottom right. On the far right edge, there are some vertical blue strokes that look like stylized leaves or branches.

**Thank You**
